Problems and Solutions

1. Problem: prompt that GBK code cannot be represented when outputting.

Solution: it is found that there are many escape characters. It is speculated that there is an error in the conversion list of word segmentation results. Change the conversion method and solve it.

2. Problem: the execution time of the program is too long. It is speculated that there is a dead cycle.

Solution: it is found that a variable judged by the while loop condition is not assigned in the loop, resulting in an endless loop.
